

**Below is an Accidental Injury Prevention Specialist's opinion on Life-Meter™ for Children.**

The following three questions were asked by a Life-Meter™ representative.

**1.How was Life-Meter used?**

**2.What was the outcome when using the product, did it increase awareness?**

**3.Do you feel that using Life-Meter at your events and in your program made a difference?**

Karissa,

In response to your email, I have distributed over 500 Life-Meters throughout New Mexico and the Albuquerque area.

**How was Life-Meter used?** I coordinated with childcare centers, community service agencies and schools. I provided the presentation information that was provided by Life-Meter. It is important to provide information to the parents along with the Life-Meter.

**What was the outcome when using the product, did it increase awareness?**

Parents showed a great interest in receiving a Life-Meter and were anxious to put it in their car. Many parents shared they had not even thought how hot it gets in the car. One parent admitted to leaving her three children in the car while running into the store to find her children hot.

**Do you feel that using Life-Meter at your events and in your program made**

**a difference?** I believe the Life-Meter makes a difference in programming especially when there is an opportunity to distribute them in the appropriate places. I actually saw a couple of the parents and they thanked me again for the Life-Meter.

Respectfully,

Helen S. BSHS, SCPS  
Director, Injury Prevention/Outreach Specialist
